

Post-operative medications for:

## Cataract surgery

RIGHT / LEFT eye

Notes: Always wait 3-5 minutes between eyedrops. If multiple eyedrops are due at the same time, allow the eyedrop to absorb before putting in next eyedrop

	Medication	How many times PER DAY	How long	Notes
A	Maxidex eyedrop	4 times per day	4 weeks	Steroid eyedrop to control inflammation. Shake before use. Should look "milky".
B	Chlorsig eyedrop (Chloramphenicol)	4 times per day	2 weeks	Antibiotic eyedrop to prevent infection
C	Acular eyedrop (Ketorolac)	4 times per day	4 weeks	Non-steroidal anti-inflammatory to reduce risk of macula swelling
